## Data Insight 6.2 is now generally available

Data Insight 6.2, released on June 7, is packed with additional improvements for visibility, compliance, data privacy, and data security, including:

- **Advanced integration with Microsoft 365** enables automated and simplified content classification for SharePoint and OneDrive.

- **Intelligent data access management** and "true" ownership identification for Microsoft 365 provides better data security and reduces risk. Continuing the Veritas "choice of deployment" strategy, Data Insight 6.2 now supports Azure and hybrid cloud deployment options.

- **Advanced integration with Network File System (NFS) repositories** enables automated and simplified content classification.

- **Reduce ransomware risk** with quick threat detection responses that help identify possible ransomware hidden in files. The build-in ransomware file group identifies over 880 ransomware extensions, reporting on potential ransomware impacted files.

- **Advancements to Veritas' built-in classification engine** streamlines data privacy and compliance requirements:

  o New and updated PII data policies for India, Mexico, and United Arab Emirates, bringing the total out-of-the-box sensitive data policies to over 75 countries.

  o Updated Coronavirus healthcare policy and workplace harassment policy, bringing the total number of out-of-box policies to over 150 and more than 900 data patterns.

- **Improved Power BI integration** offers visually stunning and dynamic reporting. Users can subscribe to specific reports through Veritas consulting services or develop their own and integrate with data from other tools.
